

ABSTRACT OF THE DISCLOSURE

An alkaline storage battery of the present invention includes a battery case and a group of electrodes. The battery case is provided with a resin case and a coating layer made of a resin formed on at least one surface
5 selected from an inner surface and an outer surface of the resin case. The hydrogen permeability coefficient of the resin that is the material of the coating layer is 1×10^{-15} mol·m/m²·sec·Pa or less.
